سری ششم تمرینات ریاضی مهندسی

مسائل با شرایط مرزی و یا شرایط اولیه مرزی زیر را حل کنید.

$$1. \Delta u = r\theta, \quad \backslash \leq r \leq e, \quad \circ \leq \theta \leq \pi$$
$$u|_{r=\backslash} = \circ, \quad u|_{r=e} = \circ, \quad u|_{\theta=\circ} = \circ, \quad u_{\theta}|_{\theta=\pi} = \circ$$

$$2. u_t = \text{¶}\Delta u + xy t, \quad \circ \leq x, y \leq \backslash, t \geq \circ$$
$$u(x, y, \circ) = ye^x,$$
$$u(\circ, y, t) = u_x(\backslash, y, t) = u_y(x, \circ, t) = u_y(x, \backslash, t) = \circ$$

$$3. u_{tt} = u_{xx} + \text{¶}u_{yy} + xe^{y+t}, \quad \circ \leq x \leq \pi, -\pi \leq y \leq \pi, t \geq \circ$$
$$u(x, y, \circ) = xye^x, \quad u_t(x, y, \circ) = y,$$
$$u|_{x=\circ} = u|_{x=\pi} = \circ, \quad u|_{y=-\pi} = u|_{y=\pi}, \quad u_y|_{y=-\pi} = u_y|_{y=\pi}$$

$$4. u_{tt} = \text{¶}\Delta u + xyz t, \quad \circ \leq x, y, z \leq \backslash, t \geq \circ$$
$$u|_{t=\circ} = xye^z, \quad u_t|_{t=\circ} = \circ, \quad u|_{x=\circ} = u|_{x=\backslash} = \circ,$$
$$u|_{y=\circ} = u_y|_{y=\backslash} = \circ, \quad u_z|_{z=\circ} = u_z|_{z=\backslash} = \circ$$

$$5. u_{tt} + u_{xxxx} - u_{yy} = xye^t, \quad \circ \leq x, y \leq \backslash, t \geq \circ$$
$$u|_{t=\circ} = xy, \quad u_t|_{t=\circ} = e^{x+y},$$
$$u|_{x=\circ} = u_x|_{x=\backslash} = u_{xx}|_{x=\circ} = u_{xxx}|_{x=\backslash} = u_y|_{y=\circ} = u|_{y=\backslash} = \circ$$

مسائل زیر را با استفاده از تبدیلات فوریه متناهی حل کنید.

$$1. u_{tt} = \text{¶}u_{xx} + \text{¶}e^{t+x}, \quad \circ \leq x \leq \pi, t \geq \circ$$
$$u(x, \circ) = e^x, \quad u_t(x, \circ) = \circ, \quad u_x(\circ, t) = t, \quad u_x(\pi, t) = \backslash$$

$$2. u_{xx} + u_{yy} + u_{zz} = xyz, \quad \circ \leq x, y, z \leq \backslash$$
$$u(\circ, y, z) = yz, \quad u_x(\backslash, y, z) = \circ,$$
$$u_y(x, \circ, z) = xz, \quad u(x, \backslash, z) = \circ,$$
$$u(x, y, \circ) = xy, \quad u(x, y, \backslash) = \circ$$

$$\text{3. } u_t = u_{xx} + u_{xxt} - u_{xxyy} + xyt, \quad 0 \leq x, y \leq 1, t \geq 0$$

$$u(x, y, 0) = xy^2,$$

$$u|_{x=0} = yt, \quad u|_{x=1} = 0, \quad u_y|_{y=0} = xt, \quad u_y|_{y=1} = 0$$

$$\text{4. } u_{tt} = u_{xx} + u_{ttxx} - u + t\delta(x - \frac{\pi}{4}), \quad 0 < x < \pi, t > 0$$

$$u(x, 0) = x, \quad u_t(x, 0) = 1, \quad u(0, t) = t, \quad u_x(\pi, t) = 1.$$

$$\text{5. } u_t = u_{xx} + u_{yy} - u_{xxyy} - \gamma u + xyt, \quad 0 < x, y < \pi, t > 0$$

$$u(x, y, 0) = y\delta(x - \frac{\pi}{4}), \quad u_t(x, y, 0) = x\delta(x - \frac{\pi}{4}),$$

$$u_x(0, y, t) = y\delta(t - 1), \quad u(\pi, y, t) = yt,$$

$$u_y(x, 0, t) = t\delta(x - \frac{\pi}{4}), \quad u(x, \pi, t) = t^2\delta(x - \frac{\pi}{4}).$$
